Why Does My New Pump Look Different? - Water Pump 58-227, 228, 334

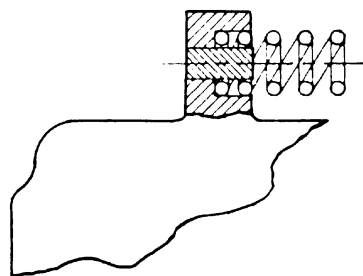

Application: Ford, Mercury 4 Cyl., 1981 - 1986. See catalog for specific applications.

Caution: Ford has consolidated three pumps into one. Two are aluminum and one is cast iron. Any of these will fit the 1.6 liter engine. All three have slightly different designs to retain the tension spring, this spring will work with any of the designs shown below.

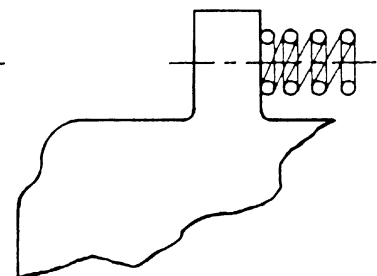

All three of these can be interchanged. However because of impeller clearance problems a thicker gasket is required. Failure to use the thicker gasket may result in engine damage. Two regular thickness gaskets may be used in place of the thicker one. If two gaskets are supplied with your pump, use them both.
