FLASH Reprogramming

Chrysler Pre-Flashed ECMs, VIN and SRI Programming

Pre-Flashed Chrysler ECM's: Chrysler introduced Flash technology ECM's in 1996. All CARDONE ECM's for 1996 and 1997 Chryslers are pre-flashed with the latest calibration ready for installation. No other programming, VIN or Service Reminder Indicator (SRI) information is required. Order these units by calling our Customer Service Department at 1-800-777-4780. The order will be processed same day if received by 5:00 PM (EST).

VIN and SRI programming: Chrysler applications 1998 and later, in addition to flashing, require VIN and SRI mileage programming. This information allows the ECM to communicate with other on-board computers in the vehicle. Failure to do so may cause idling and/or drivability problems,and may set diagnostic trouble codes. If the equipment required to program this information is not available to the installer, CARDONE offers a VIN/SRI programming service direct from our factory. Contact our Customer Service Department to order this programming with your pre-flashed ECM order. The order will be processed same day if received by 1:00 PM (EST). The following ordering information is needed: vehicle VIN and milage.

All-Makes Flash Reprogrammer: This new ECM technology allows flashing the ECM to meet changing vehicle requirements and TSB updating. Another solution for the service installer is the CARDONE All-Makes Flash Reprogrammer. This flash tool, along with a dedicated PC, and a Chrysler subscription will allow you to perform flash reprogramming and the VIN/SRI programming at your facility. Contact your sales representative for more information.

Sample pictures of the most popular unit styles are shown below. Using the vehicle year, make, model and OE number, please refer to the CARDONE Electronics catalog to determine the correct unit for your application.
